

New LED cap from H+S

H+S Zauntechnik, from Graz in the Austrian state of Styria, is launching a new post cap. It features LED lighting, is solar-powered, and fits almost all 60-by-40 posts.

It's not the first post cap with LED lighting that H+S has created. "We already had one for our Uni post," director Günther Baumhackl says, "but since the launch of our Uli post two years ago, we've been getting more and more requests for an LED cap for that post system."

H+S's Uni post is eight-sided and features installation slots on three sides, in which all sorts of different fixings systems can be installed. The Uli post is its little brother: a 60-by-40 post with just one installation slot, on the front side. Baumhackl:

"The great thing about the new LED cap is that it doesn't only fit our Uli post, but fits other posts with the same dimensions too. It means that it can be retrofitted to posts from other fencing manufacturers."

The post cap with LED lighting has a solar panel and battery as well. "So you never need to pull any cables," Baumhackl says. "You just install the cap, and you're done. The solar cap is especially practical on gates, because then the entrance is always well-lit." The battery is a model that is readily available on the market, so customers can replace it themselves when it reaches the end of its life. ■
